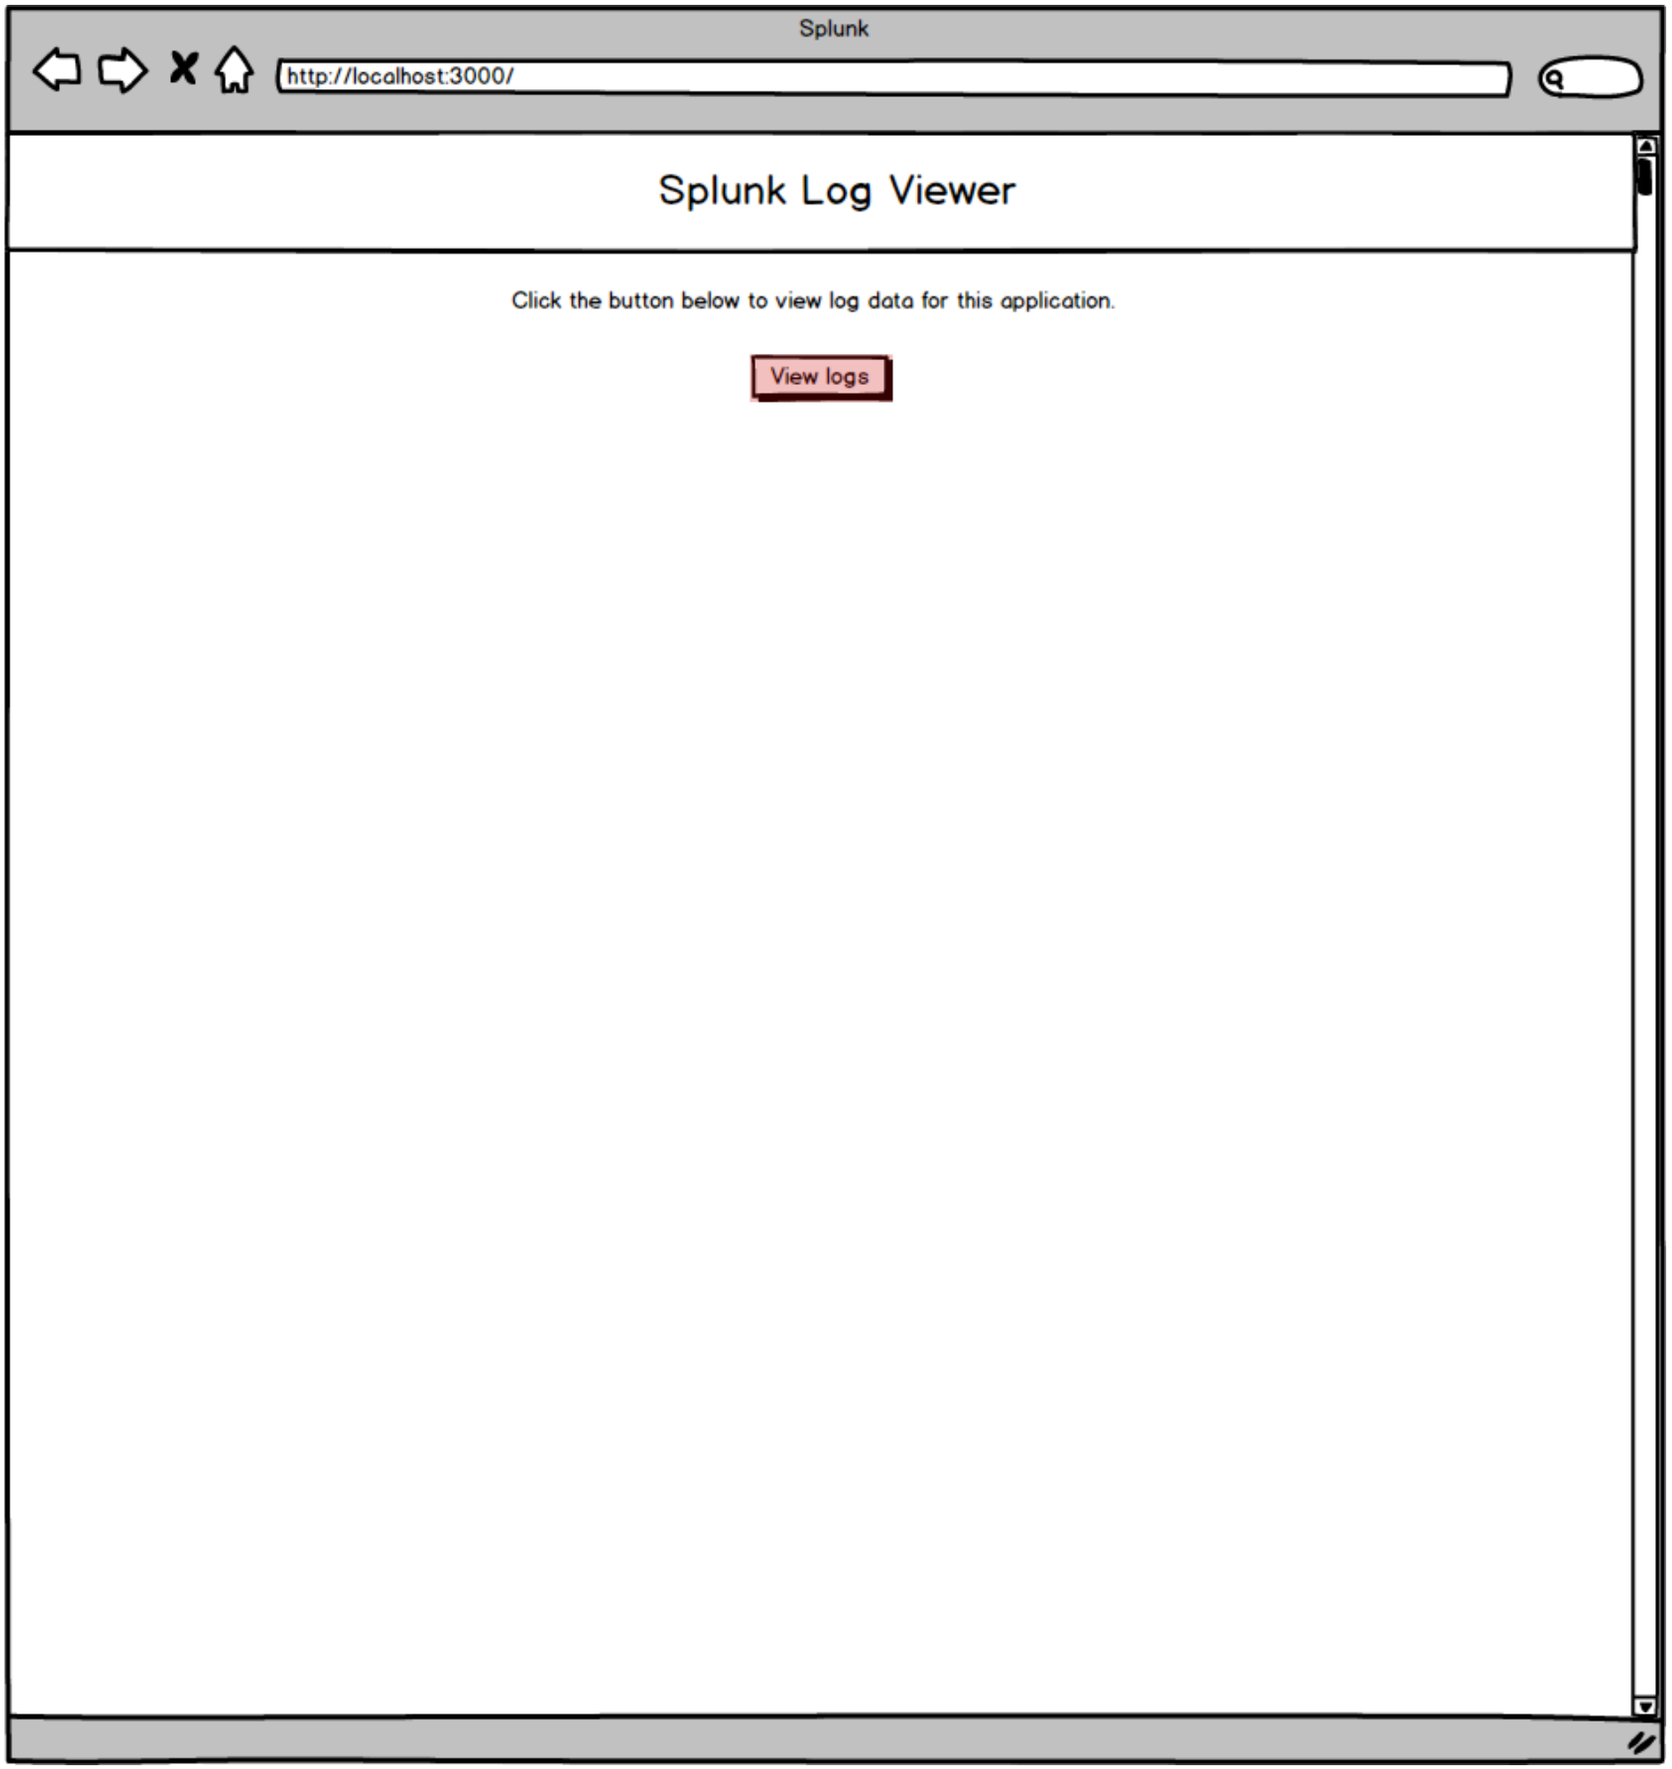
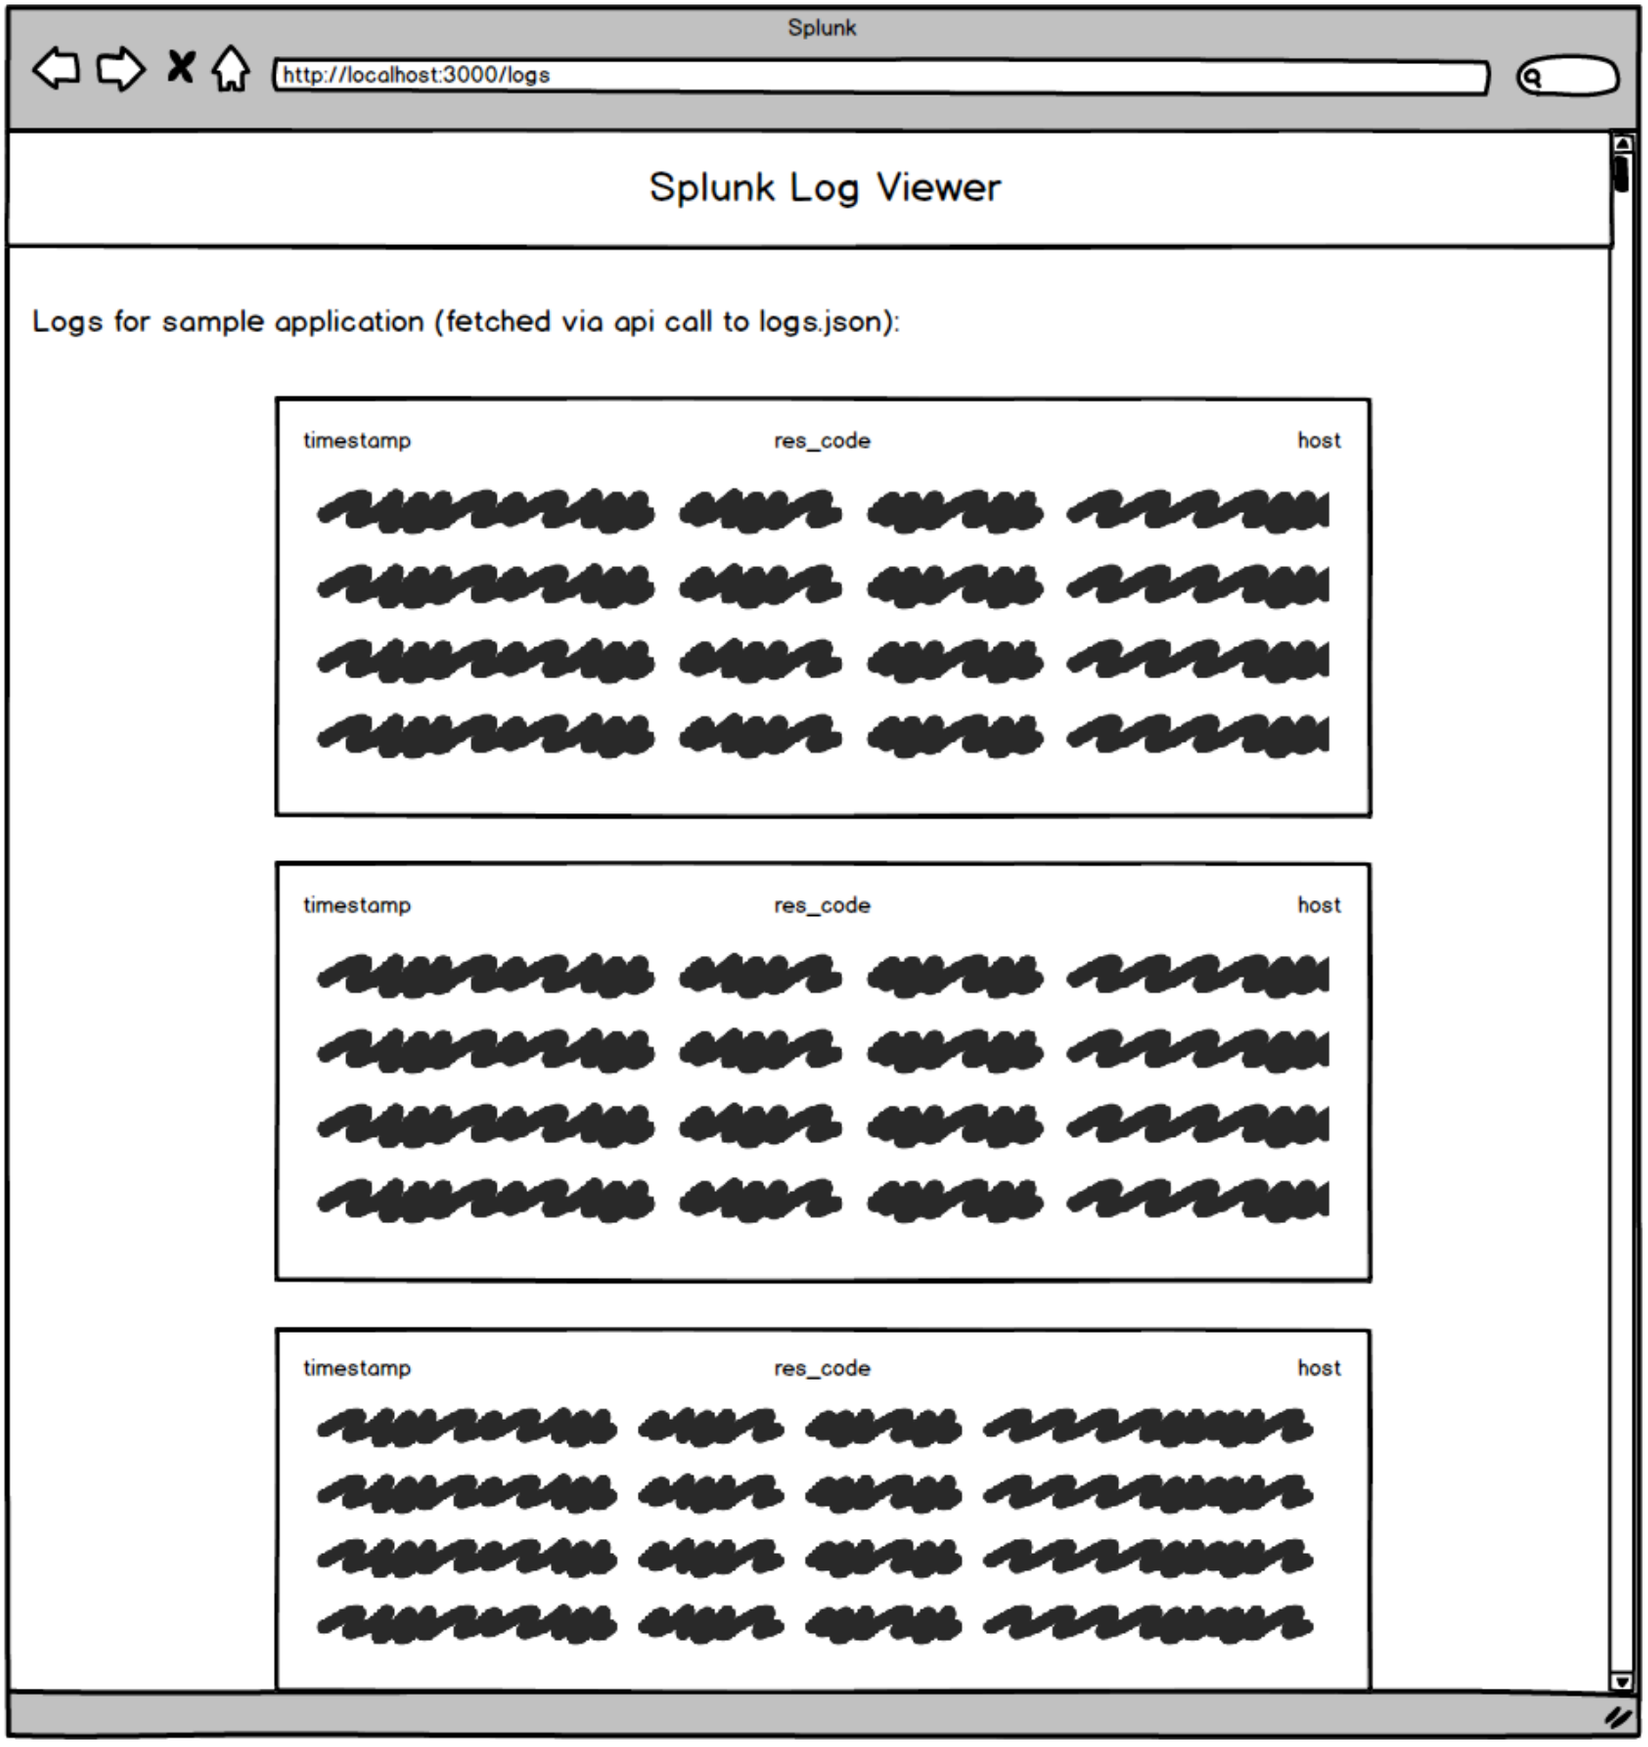
Style the layout to look and feel like a Splunk product. Take any liberties you wish.

The button contains multiple states that should be styled appropriately for the best user feedback, and renders a new view (page 2) onClick.



Use colors to separate between success (200) and failure (400, 500) response codes. Style the log content in a way that best represents machine code in a human readable manner.


Add one extra feature not shown to the log view, or change something to better aid the user in viewing her application logs.
